

## 16. RIBARSTVO

### METODOLOŠKA OBJAŠNJENJA

#### Izvori i metode prikupljanja podataka

Statistika ribarstva prati kretanje osnovnih pokazatelja iz područja slatkovodnog i morskog ribarstva te prikuplja podatke o zaposlenom osoblju, osnovnim sredstvima potrebnima za obavljanje ribolova, plovnim sredstvima, ribarskoj opremi, površinama šaranskih i pastrvskih ribnjaka, ulovu i proizvodnji morske i slatkovodne ribe, ljuškavaca, kamenica, ostalih mekušaca i školjkaša, proizvodnji mlađi te utrošku hrane i gnojiva u ribnjacima.

Statistika morskog ribarstva prati posebno podatke za pravne osobe i dijelove pravnih osoba, a posebno za ribare obrtnike koji obavljaju gospodarski ribolov (Zakon o morskom ribarstvu, NN, br. 74/94.) ili se bave uzgojem (proizvodnjom) morske ribe i ostalih morskih organizama. Podaci za pravne osobe i dijelove pravnih osoba iz djelatnosti morskog ribarstva prikupljuju se redovitom izvještajnom službom.

Podaci o ribarima, plovilima i njihovoj opremi preuzeti su od Ministarstva poljoprivrede, ribarstva i ruralnog razvoja – Uprava ribarstva. Od 1998. Ministarstvo je preuzealo u svoju nadležnost evidenciju o broju ribara, plovila i njihovoj opremi na osnovi izdanih povlastica za obavljanje gospodarskog ribolova.

Podaci o ulovu i proizvodnji morske ribe i drugih morskih organizama prikupljaju se tromjesečno. Za pravne osobe i njihove dijelove podaci se prikupljaju redovitom izvještajnom službom u tijeku godine, dok su ribari obrtnici određeni selekcijom prema ostvarenom prometu iz gospodarskog ribolova.

Podaci o ulovu i proizvodnji morske ribe daju se po najvažnijim skupinama. Iskazuje se ukupan iskrcaan ulov svim ribolovnim sredstvima korištenim tijekom tromjesečja bez obzira na područje ulova. Unose se količine istovarene svježe ribe, tj. stvarni ulov umanjen za one količine koje su iz bilo kojeg razloga odbačene od trenutka izvlačenja iz mora do istovara na kopno. Podaci za ljuškavce, kamenice i ostale mekušce i školjkaše odnose se na jestivu i nejestivu težinu ulova.

Uz navedene podatke, pri izradi konačnih rezultata o ulovu i uzgoju (proizvodnji) morske ribe i drugih morskih organizama korišteni su podaci Ministarstva poljoprivrede, ribarstva i ruralnog razvoja – Uprava ribarstva.

Kod slatkovodnog ribarstva izvještajne jedinice jesu pravne osobe i njihovi dijelovi koji se bave proizvodnjom slatkovodne ribe i mlađi te ribari obrtnici koji se bave gospodarskim slatkovodnim ribolovom ili uzgajaju slatkovodnu ribu.

Podaci o ribarima, plovnim sredstvima, ribarskoj opremi, površinama šaranskih i pastrvskih ribnjaka, količini utrošene hrane, gnojiva, energije, goriva, vrijednosti utrošenog materijala, vrijednosti izvršenih usluga i proizvodnji i ulovu slatkovodne ribe i mlađi prikupljaju se jedanput na godinu. Podaci o proizvodnji i ulovu slatkovodne ribe te proizvodnji mlađi daju se po najvažnijim vrstama.

#### Obuhvat i usporedivost

Izvještajnom službom obuhvaćene su pravne osobe i njihovi dijelovi te ribari obrtnici koji obavljaju djelatnost definiranu prema NKD-u 2002. u području B Ribarstvo te druge pravne osobe i ribari obrtnici koji obavljaju navedenu djelatnost, a razvrstani su drugdje. Kod pravnih osoba i njihovih dijelova obuhvat je potpun. Kod ribara obrtnika u slatkovodnom ribarstvu obuhvat je potpun, dok je kod ribara obrtnika morskog ribarstva obuhvat selektivan prema ostvarenom prometu iz gospodarskog ribolova.

#### Definicije

Gospodarski ribolov jest djelatnost ulova ribe i drugih morskih organizama radi stjecanja dobiti (Zakon o morskom ribarstvu – pročišćeni tekst, NN, br. 46/97.).

## FISHING

### NOTES ON METHODOLOGY

#### Data and methods of data collection

The statistics of fishing surveys basic indicators in the area of freshwater and maritime fishing. The data are collected on personnel, basic fishing means, vessels, fishing equipment, surface areas of carp and trout fishponds, catches and the production of sea and freshwater fish, crustaceans, oysters and shell-fish, production of milt, consumption of food and fertilisers in fishponds.

Data are collected separately for legal entities and parts thereof, as well as for private independent fishermen engaged in commercial fishing (the Law on Maritime Fishing, NN, No. 74/94) or in the production of sea fish and other sea organisms. Data for legal entities and parts thereof engaged in maritime fishing are collected through regular annual reports.

Data on fishermen, vessels and their equipment have been obtained from the Ministry of Agriculture, Fishery and Rural Development – Department of Fishery. Since 1998, the Ministry has taken responsibility for the records on the number of fishermen, fishing vessels and their equipment, based on the issued licences for engagement in commercial fishing.

Data on catch and production of sea fish and other sea organisms are collected quarterly. Data for legal entities and parts thereof are collected through regular annual reports, and those for private fishermen are determined by selection according to the realised turnover of commercial fishing.

Data on catch and production of sea fish are given by major groups through presentation of the total unloaded catch weight including all fishing means used in the respective quarter, irrespective of the catching area. It comprises the quantity of fresh fish unloaded, i.e. actual catch lessened by the quantity of fish that was, for no matter what reason, discarded from the total quantity in the period from the moment of catch until unloading. Data on crustaceans and shellfish refer both to edible and non-edible catch weight.

Along with the above mentioned data, in getting the final data on the catch and production of sea fish and other sea organisms, data of the Ministry of Agriculture, Fishery and Rural Development – Department of Fishery were used.

Reporting units in freshwater fishing are legal entities and parts thereof engaged in the production of freshwater fish and milt as well as tradesmen engaged in the commercial freshwater fishing or in the production of freshwater fish.

Data on fishermen, vessels and fishing crafts, fishing equipment, areas of carp and trout fishponds, quantity of food, fertilisers, energy and fuel consumed, value of material used, services done and data on production and catches of freshwater fish and milt are collected once a year. Data on production and catches of freshwater fish and production of milt are selected by main species.

#### Coverage and comparability

Reports comprise legal entities and parts thereof as well as independent fishermen engaged in the activity defined in the NKD 2002, under section B Fishing and other legal entities and independent fishermen engaged in the above said activity but classified somewhere else. The coverage of legal entities and parts thereof is full. The coverage of independent fishermen engaged in freshwater fishing is also full, while that of independent fishermen engaged in maritime fishing is selective, that is, it is defined by the turnover realised in commercial fishing.

#### Definitions

Commercial fishing is an activity of catching fish and other sea creatures for profit (the Law on Maritime Fishing – consolidated text, NN, No. 46/97).

Brod je plovni objekt čija je duljina veća od 12 m i veličina plovila (GT) veća od 15. **Ribarski brod** jest brod namijenjen i opremljen za ulov ribe ili drugih morskih organizama u moru ili na morskem dnu.

Prema Pravilniku o povlastici za obavljanje gospodarskog ribolova na moru (NN, br. 99/97.), ribarske mreže razvrstane su u sljedeće skupine: povlačne mreže (koće), okružujuće mreže (plivarice), potegače i stajačice (jednostruki i trostruki).

**Povlačnim mrežama (koćama)** pripadaju pridnena povlačna mreža (koća), pelagijska povlačna mreža (koća), obalna povlačna mreža (koćica), dredže (kunkare) i dredže (ramponi).

**Okružujućim mrežama (plivaricama)** pripadaju plivarica za malu plavu ribu, plivarica za veliku plavu ribu (tunolovka), plivarica za ciple (ciplara), plivarica za igle (plivarica igličara) i plivarica za gavune olige (plivarica oližnica).

**Potegačama** pripadaju ljetna trata ili srdelara, zimska trata ili girarica, migavica, igličara, šabakun, potegača za olige, kogol i strašin.

**Mrežama stajačicama** pripadaju jednostrukne mreže stajačice – oližnice, gavunare, girare, vojge, menulare, poklopnice, bukvare, prostice, polandare, psare, jastogare, sklatare i rakovice te trostrukne mreže stajačice – salpare, poponice, listarice i sipare.

Ljuskavcima pripadaju jastog, škampi i ostali ljuskavci.

Ostalim mekušcima i školjkašima pripadaju dagnje i ostali školjkaši, lignja, sipa, hobotnica i muzgavac.

**Boat** is a vessel that has the length of 12 m and over and weight of 15 GT and over. **Fishing boat** is a boat intended and equipped for catching fish and other sea organisms in the sea or on the seabed.

According to the Regulation on Licence for Commercial Maritime Fishing (NN, No. 99/97), fishing nets are classified into following groups: trawl nets, purse seine nets, drift nets and single and triple gillnets.

**Trawl nets** are: benthic trawl net, pelagic trawl net, coastal trawl net, dredges for Noah's ark and dredges.

**Purse seine nets** are: purse seine for small pelagic fish, purse seine for great pelagic fish, purse seine for mullets, purse seine for needlefish and purse seine for smelt.

**Drift nets** are: drift net for sardines, drift net for picarels, motion drift net, drift net for needlefish, drift net for amberjack, drift net for smelt, drift net with trap and drift net with frightening rope.

**Single gillnets** are: gillnet for sandsmelt, gillnet for smelt, gillnet for picarel (*Spicara smaris*), gillnet for sardines, gillnet for picarel (*Spicara flexuosa*), gillnet for caccarel, gillnet for bogue, gillnet for various fish, gillnet for Atlantic bonito, gillnet for sharks, gillnet for lobsters, gillnet for angle shark and gillnet for sea spider. **Triple gillnets** are gillnet for salema, triple gillnet for various fish, gillnet for solea and gillnet for cuttlefish.

**Crustaceans** are lobster, shrimps and other crustaceans.

**Other molluscs and shellfish** are: mussels and other shellfish, squid, cuttlefish, octopus and musk octopus.
